01 Executive Summary

CHAPTER 01

Executive Summary

A full-year look at how Water Sports Rentals turned sunshine into revenue in 2025.

In 2025, Water Sports Rentals generated **\$150,925.46** in revenue across **3,000** completed rentals, averaging **\$50.31** per rental. The business is highly seasonal: demand builds steadily through spring, explodes across summer, and tapers off by autumn, with **July** standing out as the single peak month of the year. Walk-in and online-booking customers together drive the majority of volume, paddleboards and kayaks are the clear product favorites, and a small group of team members consistently lead the sales leaderboard.

How to read this report

Each chapter that follows takes one view of the 2025 dashboard — seasonality, customers, products and team — and pairs the original chart with the story behind the numbers, closing with a set of practical recommendations.

Headline insight

Revenue is not evenly spread across the year: the three months of June, July and August likely account for the large majority of annual revenue, based on the shape of the monthly sales trend on the following page. This concentration is the central fact that should drive staffing, inventory and marketing decisions.

02 The Rhythm of the Season

CHAPTER 02

The Rhythm of the Season

Monthly sales, January through December 2025.

Figure 1 — Monthly sales over time, from the 2025 Annual Report dashboard.

The story of 2025 is a single, dramatic curve. Sales start the year quiet in January and February, climb gradually through March, April and May, then accelerate sharply from June into a clear peak in **July**. August holds nearly as strong before demand falls away quickly through September, and the business settles back into a quiet winter baseline by October through December.

This pattern is typical of an outdoor, weather-dependent rental business, but the steepness of the rise and fall is worth noting: the swing from the winter low points to the July peak is more than tenfold. That kind of concentration has direct implications for staffing, inventory, cash flow and marketing timing, covered in the recommendations chapter.

What this means for planning

Treat June through August as the core operating season for staffing and equipment availability, and use the shoulder months of May and September to test promotions that could smooth the curve and extend the season on either side.

03 Who Is Renting

CHAPTER 03

Who Is Renting

The customer mix behind the 3,000 rentals of 2025.

Figure 2 — Share of rentals by customer type.

Walk-in customers are the largest single segment at **35%** of rentals, closely followed by **Online Booking** at **33%**. Together these two channels account for roughly two-thirds of all business, meaning both the physical location and the booking website are equally critical revenue engines. **Resort Guests** contribute a meaningful **18%**, while **Group/Event** bookings (**11%**) and **Members** (**4%**) make up smaller but still relevant slices.

The near-even split between walk-in and online booking suggests the two channels are not competing so much as serving different moments of intent — spontaneous, on-the-day decisions versus planned trips. The very small Member share stands out as an opportunity: a formal membership or loyalty program is currently underused relative to its long-term revenue potential.

Opportunity

Membership sits at only 4% of the mix. Even a modest loyalty or punch-card program aimed at repeat walk-in customers could shift some one-off visits into recurring, more predictable revenue.

04 What They Are Renting

CHAPTER 04

What They Are Renting

The five best-selling rental items of 2025, by revenue.

Figure 3 — Top 5 rental items by revenue.

The **Stand-Up Paddle Board** is the single best-performing item in the fleet, generating noticeably more revenue than any other product. **Single Kayak** and **Tandem Kayak** follow closely behind each other in second and third place, confirming kayaks as the backbone of the product line alongside paddleboards. **Surfboards** and **Fishing Kayaks** round out the top five, each contributing noticeably less revenue than the leading three items.

The gap between the top three items and the bottom two suggests where fleet investment has the clearest payoff: adding paddleboard and kayak inventory ahead of peak season is likely to have more impact on revenue than expanding surfboard or fishing kayak stock.

Inventory takeaway

Prioritize maintenance, replacement and expansion budget for paddleboards and kayaks ahead of the June–August peak, since these items are carrying the largest share of top-line revenue.

05 The Team Behind the Numbers

CHAPTER 05

The Team Behind the Numbers

Total sales generated by each team member in 2025.

Figure 4 — Sales by team member.

Ava Martinez leads the ten-person team, with **Mia Thompson** and **Chloe Nguyen** close behind in a tightly-packed second tier alongside Ben Carter and Emma Wilson. Performance narrows toward the middle of the roster before **Isaac Patel** closes out the list with the lowest total. Overall, the spread from the top performer to the lowest is moderate rather than extreme — this looks like a reasonably balanced team rather than one carried by a single star performer.

People takeaway

Pair top performers like Ava Martinez and Mia Thompson with newer or lower-ranked staff during peak season shifts, and review whether the gap toward the bottom of the leaderboard reflects fewer scheduled hours or a coaching opportunity.

06 Behind the Data

CHAPTER 06

Behind the Data

What the underlying transaction log captures.

Every figure in this report is rolled up from a transaction-level log, where each row represents a single rental. The sample below shows the structure of that log for the month of January 2025.

Date & calendar fields	Rental date, month, week number, day of week, season
Customer & channel	Customer type (walk-in, online booking, resort guest, group/event, member)
Product details	Rental item, rental duration, quantity, unit price, add-ons and add-on revenue
Financials	Discount amount, total revenue per transaction
Operations	Team member, launch site, payment method, weather conditions

This level of detail is what makes every chart in this report possible — from the seasonal revenue curve down to which launch site or weather condition accompanied a given rental. It also means the business already has what it needs to go further: cross-tabbing weather against revenue, or launch site against customer type, could uncover additional stories in future reports.

07 Takeaways & Recommendations

CHAPTER 07

Takeaways & Recommendations

Turning the 2025 story into action for 2026.

Key takeaways

- Revenue is heavily concentrated in June–August, with July as the single peak month.
- Walk-in (35%) and Online Booking (33%) are the two dominant, roughly equal customer channels.
- Stand-Up Paddle Boards and kayaks (single and tandem) are the clear product leaders.
- Membership is a small share (4%) of the customer mix relative to its long-term value.
- Team performance is fairly balanced, led by Ava Martinez, Mia Thompson and Chloe Nguyen.

Recommendations for 2026

- **Staff and stock for the peak.** Lock in extra staffing hours and fleet availability for June–August, especially for paddleboards and kayaks, well before the season starts.
- **Smooth the shoulder months.** Test targeted promotions in May and September to extend high-demand weeks on either side of the summer peak.
- **Grow membership deliberately.** Build a simple loyalty program aimed at converting repeat walk-in customers into members, since this segment is currently the smallest.
- **Invest in the product leaders.** Prioritize maintenance and expansion budget for paddleboards and kayaks over lower-performing items like fishing kayaks.
- **Pair and coach the team.** Schedule top performers alongside newer staff during peak weeks, and review scheduling or training for team members toward the bottom of the leaderboard.
- **Go deeper next time.** Use the transaction-level log to explore weather, launch site and add-on revenue as drivers of the patterns seen in this report.

Closing note

This report tells the story visible in the 2025 dashboard. Because month-by-month and per-product dollar figures are read from chart axes rather than exact totals, treat specific numbers outside the four headline KPIs and customer-mix percentages as approximate, and confirm against the source data before using them for financial decisions.
